

01 · THE RIGHT MINDSET

Why 1 agent > multiple agents

The most common pitfall: creating an agent for everything. Content agent, metrics agent, email agent. Seems organized. In pra

· WRONG

AgentConteudo · creates posts

AgentMetricas · pulls numbers

AgentEmail · reads inbox

AgentCalendario · schedules meetings

Each ignores the context of the others

VS

· RIGHT

1 agent with a strong identity

+ skill carrossel-linkedin

+ skill chartmogul

+ skill gog (email + calendar)

Unified context. Coherent decisions.

MODULE 6

Skills:

The superpower system of your

agent

Why 1 agent with multiple skills beats multiple agents, how to

transform every repetitive process into a skill, and how to use third-party

skills safely.

·25 min

Intermediate Level

3/16/26, 5:40 PM

Módulo 6 · Skills | OpenClaw

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/template-material-aula-skills.html

1/11

.

The rule

Agents have purposes, not functions. Skills are the tools. An agent with 10 skills is much more powerful than 10 agents with 1 function each.

02 · ANATOMY OF A SKILL

What a skill is (and what it isn't)

A skill is a documented process that the agent executes consistently. It is not a one-off prompt. It is not an agent. It's an instruction manual + tools packaged in a folder.

skills/content/linkedin-carousel/

minimum structure

SKILL.md

Required. Describes what the skill does, when to use it, what inputs it needs, and the step-by-step execution. The agent reads this before running.

examples/

Optional. Examples of input/output for the agent to calibrate the quality expected.

scripts/

Optional. Bash or Python scripts that the skill executes (e.g. upload, call API, process file).

.

Prompt vs. Skill

Prompt is a one-time request. Skill is a permanent process. When you document a process as a skill, it becomes consistent, tested, and improves over time
· just update the SKILL.md.

03 · ORGANIZATION

How to organize your skills into folders

Clear categories = better search + less confused agent. The actual structure used in the Amora workspace:

3/16/26, 5:40 PM

Module 6 · Skills | OpenClaw

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/template-material-aula-skills.html

2/11

REAL STRUCTURE · AMORA WORKSPACE (BRUNO OKAMOTO)

skills/

···content/

- content production

- ···carrossel-instagram/

- ···carrossel-linkedin/

- ···yt-hype/

- YT titles, descriptions, tags

-

···analytics/

- metrics and data

- ···chartmogul/

- MRR, churn, LTV

- ···ga4/

- Google Analytics 4

-

···operations/

- recurring operations

- ···notion-api/

- CRUD in Notion (tasks, ideas)

- ···crisp-wrapup/

- support report

- ···planner-adhd/

- daily planning

-

···research/

- research and intelligence

···deep-research-protocol/

···blogwatcher/

RULE

WHY

1 skill = 1

process

Focus and consistency

carrossel-instagram · carrossel-linkedin. Format, tone, and rules are different.

Category before

creating

Avoids mess

Always ask: in which category does this skill fit? If it doesn't exist, you might need to create the category first.

Descriptive name in

kebab-case

Readability

yt-hype is clearer than youtube. The agent understands the scope better.

04 · THE SCALING MINDSET

3/16/26, 5:40 PM

Module 6 · Skills | OpenClaw

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/template-material-aula-skills.html

3/11

Every repetitive process becomes a skill

The right question after any task: "Will I do this again?" If the answer is yes · it becomes a skill.

- Weekly metrics report

Every Monday you ask for MRR, churn and new subscriptions · skill

chartmogul-weekly

- Video publishing on

YouTube

Every recording needs a title, description and tags · skill yt-hype

- Meeting brief

Before every call you want context of the person and agenda · skill meeting-prep

- Monthly churn analysis

Every month you analyze who canceled and why · skill churn-analysis

.

The difference that matters

Prompt = request you repeat in memory. Skill = process that lives in the file, tested, consistent, and improves over time. When you change the skill, it changes forever.

05 · SUB-AGENTS

Sub-agents execute skills · they are not left loose

Sub-agents are great for parallel and long tasks. But always with a closed scope.

- LOOSE SUB-AGENT

"Spawn an agent to take care of the content"

- makes random decisions

- unpredictable output

VS

- SUB-AGENT WITH SKILL

"Spawn an agent to execute the skill linkedin-carousel with this input"

- defined process

- predictable output

3/16/26, 5:40 PM

Module 6 · Skills | OpenClaw

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/template-material-aula-skills.html

4/11

- freelancer without briefing
- auditable result

06 · SECURITY OF YOUR WORK

Your skills are assets · make a backup

Skills represent months of documented process. A corrupted workspace without backup = lose everything.

MANUAL BACKUP VIA GIT

In your workspace

```
cd ~/meu-workspace
```

```
git add skills/
```

```
git commit -m "backup skills $(date +%Y-%m-%d)"
```

```
git push
```

AUTOMATIC BACKUP CRON (RECOMMENDED)

Request to the agent to configure:

"Configure a cron to run in the early morning,
do git add + commit + push of my skills
to the private repository"

.

Skill that is not in Git does not exist

Private repository on GitHub. Access only for you. Configure it today, not after something happens.

07B · REAL EXAMPLE

Analytics skill: Meta Ads from Pixel Educação

Real skill used daily to track sales and campaign performance. See

below the complete SKILL.md · credentials replaced with XXXX for didactic purposes.

SKILLS/ANALYTICS/META-ADS/SKILL.MD · COMPLETE FILE

3/16/26, 5:40 PM

Módulo 6 · Skills | OpenClaw

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/template-material-aula-skills.html

name: meta-ads

description: >

Sales and performance report for Meta Ads (Facebook/Instagram) for Pixel Educação. Pull metrics from campaigns, revenue per product, refund rate, conversion funnel.

Trigger when: "meta ads", "sales report", "how much did you sell today", "Pixel revenue", "OpenClaw Minicurso sales", "Micro-SaaS PRO sales", "refunds", "sales dashboard", "campaign results".

metadata:

author: amora-cos

version: 1.0.0

domain: pixel-educacao

Meta Ads · Pixel Educação

Automated sales and campaign performance report.

Context

Pixel Educação = main company (edtech)

- Products: OpenClaw Minicurso (product_id 27) + Micro-SaaS PRO (product_id 8)
- Default window: last 24h (configurable)
- Output: HTML dashboard with consolidated metrics

Authentication

Real output generated by the skill

HTML dashboard automatically generated every day at 8 am · real values · omitted.

3/16/26, 5:40 PM

Module 6 · Skills | OpenClaw

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/template-material-aula-skills.html

6/11

07C · THIRD-PARTY SKILLS

How to use third-party skills safely

ClawHub (clawhub.com) is the official community skills marketplace. Before installing anything · an inviolable rule: read the code.

..

Skills have full access to your workspace

A skill can read your files, run commands, access credentials. Malicious skill

= real risk. Do not install without reviewing.

MANUAL REVIEW PROTOCOL

1. Clone into a temporary folder

git clone <https://github.com/usuario/skill-nome> /tmp/review-skill

2. Read the SKILL.md

3/16/26, 5:40 PM

Módulo 6 · Skills | OpenClaw

<file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/template-material-aula-skills.html>

7/11

cat /tmp/review-skill/SKILL.md

3. Look for suspicious patterns

grep -r "curl" /tmp/review-skill/ · sending data where?

grep -r "rm -rf" /tmp/review-skill/ · deleting what?

grep -r "eval" /tmp/review-skill/ · executing what?

What to check

DANGER

curl to unknown domains

Skill sending data from your workspace to an external server that you do not control.

DANGER

rm -rf without clear context

Deleting files without an obvious reason related to the skill's function.

ATTENTION

eval of unsanitized variables

Can execute arbitrary code depending on the input.

ATTENTION

Access to files outside the project

Skill that reads ~/.ssh/, ~/.config/ or other sensitive directories without a reason.

OK

"Verified" Badge on ClawHub

Skills with a badge have been reviewed by the team. Still, read the code first.

· BONUS MATERIAL

Skill that audits other skills

Created by Adrylan (a course student). Based on OWASP ASI Top 10 (2026), Snyk

ToxicSkills Study and Aguara Detection Rules. 9 verification categories: prompt injection, exfiltration, malicious code, credentials, social engineering...

1

Download the file on Drive

· Curso OpenClaw · aula-06-skills · skill-seguranca/SKILL.md

2

Ask your agent to install

"Install the skill audit skill. The file is in [paste the path or content of SKILL.md]. Save to skills/operations/skill-seguranca/SKILL.md"

3/16/26, 5:40 PM

Módulo 6 · Skills | OpenClaw

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/template-material-aula-skills.html

8/11

08 · COMPATIBILITY

Do Claude Code skills work on OpenClaw?

It depends on the type.

TYPE

COMPATIBILITY

WHAT TO DO

CLAUDE.md

(project instructions)

· · Different

format

Take advantage of the content

Copy the instructions and rules to the SKILL.md of

OpenClaw. The logic is compatible, the format

changes.

bash/Python Scripts

· Compatible

Runs without modification

The execution environment is the same. Just

add a SKILL.md to document it.

MCP Servers

· Not

compatible

Needs adaptation

MCP is specific to Claude Code. Search for the

equivalent on ClawHub or implement via

native skill.

.

Practical rule

3

Ask the agent to store in memory

"Whenever I ask to install a new skill, run skill-seguranca before installing. Write this down in AGENTS.md."

· HOW TO USE · FROM NOW ON

Before installing any new skill (especially from ClawHub or third parties), paste the SKILL.md and say:

"Audit this skill before I install it"

The agent runs the complete checklist and delivers: · Clean · · Attention · · Critical.

3/16/26, 5:40 PM

Module 6 · Skills | OpenClaw

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/template-material-aula-skills.html

9/11

If you have an elaborate prompt that you repeatedly use in Claude Code · it becomes a SKILL.md in OpenClaw. The behavior will be equivalent.

PRACTICAL EXERCISE

· Creating your first skill

Think about a process you do every week. Let's turn it into a skill.

1

Identify the repetitive process

What task do you ask the agent to do more than once a week? Ex: metrics report, LinkedIn post, meeting summary.

2

Ask the agent to create the skill

Paste this prompt adapted to your process:

"I want to transform the process of [your process] into a skill. Create the structure in skills/[category]/[skill-name]/SKILL.md with: description, when to use, required inputs, step-by-step execution, and quality criteria."

3

Test by running the skill

New session. Ask the agent to execute the skill without giving extra context:

"Execute the skill [name] with [real input]"

Consistent result with the process you documented? Adjust the SKILL.md if necessary.

3/16/26, 5:40 PM

Módulo 6 · Skills | OpenClaw

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/template-material-aula-skills.html

10/11

SUMMARY

What you learned

The 6 key concepts of this module

1 agent > multiple

Unified context, coherent decisions. Skills are the tools, not separate agents.

Skill = documented process

It's not a random prompt. It's a SKILL.md with instructions, inputs and quality criteria.

Organization into categories

content/, analytics/, operations/, research/.

One skill per process, not a generic "youtube" skill.

Everything repetitive becomes a skill

If you do it more than 2 times · document it, test it, it becomes a skill. Consistency > improvisation.

Backup on Git

Skills are assets. Private repository, commit regularly or automatic cron.

Third parties: read the code

Verified ClawHub is reliable, but always review scripts before installing. Access to the workspace is total.
