

You already have skills.

Now create your own.

· Bonus · Complements Module 6

/create-skill transforms any process you solve with your agent into a permanent skill · with automatic QA and 3 modes of use.

WHAT IT IS

In 3 sentences

.

THE PROBLEM

Every time you solve something with your agent, that knowledge disappears when the chat closes. Next time, you explain everything again.

.

THE SOLUTION

/create-skill captures the process you solved together and teaches the agent once and for all.

5 min

to create a skill

QA

automatic before saving

3

modes of use

3/16/26, 7:10 PM

Bonus: Create Your Own Skills with /create-skill · OpenClaw Course 2026

<file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/aula-bonus-skill-creator-v3.html>

1/13

.

THE RESULT

Next time, it already knows. You don't explain again. The process is documented in the agent forever.

.

It's like noting a process in your agent's manual. Except the agent notes it down itself. You solve it once, type /criar-skill, and that's it. The agent will never forget how to do it again.

CONCEPT

Skill vs Prompt

Understand the difference before creating.

.

Prompt

- Single request, for that moment
- Disappears when you close the chat
- You remember · the agent doesn't
- Different result every time

.

Skill

- Process taught once and for all
- Stays forever in the agent
- Agent does the same every time
- Consistent result, without explaining

.

Prompt is what you ask for. Skill is how the agent learns to do.

Any process you repeat more than 2 times is a candidate for a skill.

2/13

THE HEART OF THE CLASS

The two paths to create a skill

Two different starting points. Both arrive at the same place: a working skill.

PATH A

I already did it. I want to preserve it.

You and the agent just solved something together · it may have taken hours, several attempts, bug discovery. It was laborious. This knowledge cannot disappear when the chat closes.

How it works:

1

You solved the problem

You spent time together · testing, adjusting, finding the right path. The history is there.

2

You just type this:

/criar-skill

3

The agent reads the history and creates

Extracts the complete flow, workarounds, pitfalls · everything that was discovered during the conversation.

4

You approve and the skill is saved

Next time, it takes 30 seconds. The agent already knows what to do.

3 real examples:

EXAMPLE 1 · INVOICE

NF Prefeitura de Curitiba · 4 hours of trial and error

4 hours testing the portal, finding bugs, discovering that the "Tomador" field requires CPF without mask, that the withheld ISS needs to be manually marked in two different places different, that the portal crashes between 8am-9am due to the volume of access. All this captured in 2 minutes of /criar-skill. Never needed to explain again.

3/16/26, 7:10 PM

Bonus: Create Your Own Skills with /criar-skill · OpenClaw Course 2026

<file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/aula-bonus-skill-creator-v3.html>

3/13

- Skill created in 2 min, never wasted time with the portal again

EXAMPLE 2 · ONBOARDING

Client onboarding · 12 steps the agent would forget in the middle

The process had 12 steps: create account, configure integration, send welcome email, schedule activation call, add to the WhatsApp group, send materials... The agent always forgot some in the middle. After /criar-skill, it executes all 12 in the correct order, every time, without skipping any.

- Zero steps forgotten since it became a skill

EXAMPLE 3 · REPORT

Metrics report · the formatting that never came out right

Specific table, specific order of metrics, red color for decrease and green for growth, comparison with previous month always in the same format. Every time I asked for the report, I had to explain everything again. After /criar-skill, upon hearing the word "report," the agent already knew exactly how to assemble it.

- Report ready without explaining formatting

EXACT PROMPT TO TYPE:

/criar-skill

That's it. The agent reads the conversation history and does the rest.

PATH B

I have an idea. I want to structure it.

You have a process in your head · or an idea of how you want the agent to help you · but you don't know exactly how to structure it. You don't need to know. The agent asks questions and discovers it together with you.

3/16/26, 7:10 PM

Bonus: Create Your Own Skills with /criar-skill · OpenClaw Course 2026

<file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/aula-bonus-skill-creator-v3.html>

How it works · real conversation:

/create-skill I want a skill to analyze competitors

·
·

Great! When you say "analyze", what do you want to know? Price, features, reviews · or everything?

Mainly price and what they complain about in the reviews

·
·

Got it. And the final result · do you want a short text to read quickly or a comparative table?

Short text, 3 main points

·
·

Perfect. One more thing: do you search manually or do you want me to search online?

Online search

·
·

Understood. I'm going to create the "analyze-competitors" skill. You'll receive: text with 3 points · price, main complaints in the reviews, and a quick summary. Can I confirm the deploy?

The agent doesn't wait for you to know the process · it helps you discover it.

3 vague ideas that became skills:

Vague idea · Skill created

"I want to generate a weekly sales report" · weekly-sales-report skill

Vague idea · Skill created

"I want to respond to comments maintaining my tone" · instagram-comment-response skill

Vague idea · Skill created

3/16/26, 7:10 PM

Bonus: Create Your Own Skills with /create-skill · OpenClaw 2026 Course

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/aula-bonus-skill-creator-v3.html

5/13

REAL CASES

Who is already using it and what they have created
Skills created by students of the OpenClaw Course.

FINANCIAL

emitir-nf-curitiba

7 steps, 3 known portal bugs, ideal access time
(7am), required fields not marked as such. Zero
rework.

· Saved in 2 min after 4h of trying

SALES

follow-up-proposta

Template customized by customer segment, ideal
sending window (D+2), open check before
resending. Response rate increased.

· Used 3× per week automatically

CONTENT

carrossel-linkedin-microsaas

Specific tone of voice, 7-slide structure, hook
with number on the first slide, CTA on the
last. The agent replicates the pattern without
needing to explain.

OPERATIONS

onboarding-cliente

12 steps in order, with verification checklist,
automatic emails for each step and alert flag if any step goes unanswered for 24h.

"I want to create a client meeting briefing" · skill briefing-reuniao-cliente

EXACT PROMPT TO USE:

/criar-skill quero [describe your idea here]

The more specific, the fewer questions the agent asks. But even vague works · it will
ask what is missing.

3/16/26, 7:10 PM

Bonus: Create Your Own Skills with /criar-skill · OpenClaw Course 2026

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/aula-bonus-skill-creator-v3.html

6/13

- 3 carousels per week without drafts
- Zero forgotten steps since deploy

ANALYTICS

weekly-mrr-report

Skill scheduled via cron every Sunday at 8 PM. Pulls data from ChartMogul, formats with comparison previous week, highlights in red any metric that fell more than 5%, sends directly to Telegram. The agent executes on its own · no one needs to remember to ask.

- Running every week for 3 months without intervention

TELEGRAM

Your agents on Telegram also create skills

Most students use OpenClaw via Telegram. The /create-skill works the same · just type it in the chat of your agent.

.

Works on Telegram the same way

No need to open the terminal, no need to be on the computer. Solved something in your agent's chat?

Type /create-skill right there. The skill is saved in the agent's workspace.

Ready-made prompts to copy and use on Telegram:

1

Capture what you just did

/create-skill

Use it right after solving something together with the agent. It reads the conversation history and creates the skill automatically. You just approve.

3/16/26, 7:10 PM

Bonus: Create Your Own Skills with /create-skill · OpenClaw 2026 Course

<file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/aula-bonus-skill-creator-v3.html>

7/13

2

Preserve a process you already know

/create-skill [paste the process steps here]

Directly paste the process you do. The agent extracts the steps and structures the skill. Example:

/create-skill to issue invoices in my municipality:

- 1) access portal.prefeitura.sp.gov.br
- 2) click on NFS-e
- 3) fill in the Payer field with CPF without mask
- 4) mark Withheld Tax in "Yes"
- 5) confirm and save the PDF

3

Brainstorm of a new idea

/create-skill I want [describe here]

Real examples that became skills:

- /create-skill I want to analyze competitors' Instagram feed
- /create-skill I want to generate a weekly sales report automatically
- /create-skill I want to respond to comments maintaining my tone of voice
- /create-skill I want to create a meeting briefing with a client

4

Without /create-skill · it also works

transforms what we did into a skill

saves this process as a skill

The agent understands the intention even without the exact command. If you're already in the middle of a conversation and want to preserve what you did, you can speak naturally.

3/16/26, 7:10 PM

Bonus: Create Your Own Skills with /create-skill · OpenClaw Course 2026

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/aula-bonus-skill-creator-v3.html

8/13

.

Multiple agents? Each one has its own skills.

If you use Amora, a sales agent, and a content agent, each can have their own skills. The created skill stays in the agent's work

QUALITY

QA and deploy

Happens before saving. You only need to approve.

..

The agent checks the skill before saving.

It checks: correct name, real examples included, error cases covered, correct deploy path. If something is missing, it corrects it

What is generated · 2 files:

skill-name/ ... SKILL.md # The documented process: steps, examples, edge

cases ... evals/ ... evals.json # Test cases · ensures that the skill

works as expected

.

evals.json is proof that the skill works

It's not just documentation. They are real tests with input and expected output. If the skill is updated in the future, the evals conf

9/13

COMPOSITION

Skills + Crons + Sub-agents

Skills alone are already valuable. Combined, they become a pipeline.

- Skill + Cron

The agent executes on its own, at the right time, without you having to remember.

- Having to remember every week to request the metrics report

- Skill + cron every Sunday at 8 PM ·

the report arrives in Telegram without you doing anything

.

The skill defines what to do. The cron defines when. Together, the agent works on autopilot.

- Skill + Sub-agent

Send an assistant to do a task with clear instructions.

- Spawning an agent to "take care of the content" · without knowing exactly what to do

- Spawning an agent to execute the linkedin-carousel skill with this specific input

.

The skill is the sub-agent's briefing. With it, the result is predictable · the same every time.

- Skill + Skill

<file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/aula-bonus-skill-creator-v3.html>

10/13

A process that calls other processes · like a content pipeline.

1 recorded video · yt-hype skill generates YouTube title and description

· linkedin-carousel skill generates 7 slides of the main concept

· instagram-carousel skill generates version for the feed

.

1 video · 3 skills in sequence · 3 pieces of content ready. Complete pipeline, without building from scratch every time.

INSTALLATION

How to install · and how to use

2 minutes of setup. Works on Claude Code and OpenClaw.

.

"Is it safe to run curl | bash?"

Good question · and you should always ask it. In this case: the repository is Bruno's (github.com/okjpg/skill-creator

), it's MIT license, open source. The script does exactly one thing: copies SKILL.md to

~/.claude/skills/criar-skill/. You can read the install.sh before running · the link is

right below. It doesn't execute anything, doesn't install dependencies, doesn't open ports.

terminal · install

Install /criar-skill

curl -fsSL <https://raw.githubusercontent.com/okjpg/skill-creator/main/install.sh> | b

<file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/aula-bonus-skill-creator-v3.html>

11/13

Check if it has been installed

ls ~/.claude/skills/criar-skill/

.

How to ask your agent to create the first skill

After installing, open your agent's chat and use any of these ways:

REAL EXAMPLES OF HOW TO TRIGGER

/criar-skill

- If you just did something with the agent, it captures the history automatically

/criar-skill Every day I export the ChartMogul report and send it to the Team Slack

- Paste directly what you do. It extracts the steps

/criar-skill I want a skill to analyze Instagram comments and separate the negative ones

- Vague idea. It will ask 3-5 questions to structure it

turn what we did today into a skill

- Without /criar-skill it also works. The agent recognizes the intention

.

First recommended skill

Choose the process you repeat the most or that gives you the most trouble when you make a mistake. Invoice issuance, recurring

Install, create your first skill.

Then never explain it again.

3/16/26, 7:10 PM

Bonus: Create Your Own Skills with /criar-skill · OpenClaw Course 2026

file:///root/.openclaw/workspace-amora-cos/reports/curso-openclaw/aula-bonus-skill-creator-v3.html

12/13

Bonus: /criar-skill · Complements Module 6 · OpenClaw Course 2026

The process is documented in the agent forever. You solve it once and guarantee it forever.
