MODULE 06 · SKILLS

Build Your AI COO

What Are Skills?

Skills are tools you "plug" into the agent. It's like in the Matrix: "Tank, I need a pilot program."

·Matrix Analogy

Trinity learns kung fu in 10 seconds. Your agent learns to generate PDFs, draw diagrams, or deploy with 1 command.

How to Install Skills

Option 1: ClawHub (Official Marketplace)

Option 2: GitHub (Custom Skills)

..Security First

Always review the code of third-party skills before installing. They run with agent permissions.

Search for available skills

```
openclaw skills search pdf
```

Install from ClawHub

```
openclaw skills install nano-pdf
```

List installed skills

```
openclaw skills list
```

BASH

Install directly from the repository

```
openclaw skills install github:user/repo-skill
```

Real example

```
openclaw skills install github:brunocgc/skill-excalidraw
```

BASH

MODULE 06 · SKILLS

Build Your AI COO

Essential Skills by Profile

Entrepreneur / Founder

· nano-pdf

Generate formatted PDFs (reports, pitches, one-pagers). Clean HTML · PDF.

· · excalidraw

Draw diagrams, wireframes, flowcharts. Ideal for quickly visualizing ideas.

· perplexity

Advanced search with sources. Great for market research, competitors, trends.

· Creator / Content Producer

· · hand-draw-graphics

Generate hand-drawn graphics (handwriting style). Perfect for thumbnails/posts.

· video-frames

Extract frames from videos for analysis. Useful for editing, content QA.

· · openai-image-gen

DALL-E integration. Generate custom images directly from the agent.

· Dev / Technical

· github

Manage repos, PRs, issues. Deploy, commits, reviews via agent.

· coding-agent

Sub-agent specializing in coding. Delegates programming tasks.

- tmux

Manage tmux sessions. Run commands in the background, monitor servers.

MODULE 06 · SKILLS

Build Your AI COO

Creating Your First Custom Skill

Skills are just directories with a SKILL.md describing what they do and executable files.

Basic Structure

Example: Weather Skill

SKILL.md:

index.js:

my-skill/

... SKILL.md # Skill description (the agent reads this)

... index.js # Main script

... package.json # Dependencies (if necessary)

TEXT

Weather Skill

Fetch current weather for any city using OpenWeatherMap API.

Usage

```bash

weather <city>

```

Example

```bash

weather "São Paulo"

# · Temperature: 22°C, Condition: Partly Cloudy

```

MARKDOWN

#!/usr/bin/env node

const axios = require('axios');

const city = process.argv[2];

const apiKey = process.env.OPENWEATHER_API_KEY;

axios.get(`https://api.openweathermap.org/data/2.5/weather?q=\${city}&appid=\${apiKey}

.then(res => {

 console.log(`Temperature: \${res.data.main.temp}°C`);

 console.log(`Condition: \${res.data.weather[0].description}`);

JAVASCRIPT

Tip

Place it in `~/openclaw/skills/my-skill/` and the agent will automatically detect it.

```
})
```

```
.catch(err => console.error('Error:', err.message));
```

MODULE 06 · SKILLS

Build Your AI COO

When NOT to Install a Skill

1. Redundant Skills

Example: remind-me skill when native cron already solves it.

..Rule

If OpenClaw already has the functionality natively, do not install a duplicate skill.

Audit periodically.

2. Skills with Vulnerabilities

Research by Simon Willison: 900+ OpenClaw servers exposed by insecure skills.

Always review code before installing

Avoid skills that ask for excessive permissions

Prefer skills with many stars/forks on GitHub

3. Creators As Skills, Not Agents

Better approach: 1 agent with 8 skills > 8 specialized agents.

Why?

Skills are lighter, share context, and don't need their own memory.

Reserve agents for tasks that REALLY need autonomy.

Useful Commands

View installed skills

openclaw skills list

Uninstall skill

openclaw skills uninstall skill-name

Update skill

openclaw skills update skill-name

BASH

View skill documentation

cat ~/.openclaw/skills/skill-name/SKILL.md

MODULE 06 · SKILLS

Build Your AI COO

· Module 6 Checkpoint

2-3 essential skills installed and tested

I understand the difference between skill and agent

I know how to review third-party skill code

I audited redundant skills (remind-me, etc)

· Prompt for the Agent

Paste this prompt into your OpenClaw chat after watching Module 6:

I just watched Module 6 of the course on skills. Help me install the

right superpowers for my profile. What I need you to do: 1. Analyze my profile

· based on USER.md, recommend the most useful skills from the list per profile that

I attached 2. Teach me how to install skills: - How to install from ClawHub - How to install from a

GitHub repository - How to check if the skill is safe before installing 3. Install 2-3

essential skills that make sense for my use: - Explain to me what each one does -

Test if it worked with a practical example 4. Explain to me when NOT to install a

skill: - Redundant skills (ex: remind-me when native cron already solves it) - Skills with

security vulnerabilities - Skills that are disguised agents (when to use skill

vs create agent) Rules: - Quality > quantity · few well-configured skills >

many thrown in - Notify me about skills that need an API key before installing - In the

end, list everything that is installed and working Let's gain superpowers?

.
