MODULE 08 · MULTI-AGENTS

Build Your AI COO

When One Agent Isn't Enough

..Golden Rule: Less Is More

Multi-agents WITHOUT foundation = mess. Make sure memory, identity, and proactivity are solid BEFORE adding more agents.

When to Use Multi-Agents?

Specialized tasks: Content agent, code agent, sales agent

Autonomy required: Tasks that need to run independently of the main one

Isolated context: Large projects that should not pollute the main memory

When NOT to Use Multi-Agents?

Simple use: If 1 agent + skills solves it, don't create extra agents

Without clarity: If you don't know EXACTLY what each agent will do, wait

Weak foundation: Memory, identity and proactivity need to be solid first

Architecture: Single Gateway + agents.list

OpenClaw uses 1 gateway for all agents. You list the agents in agents.list :

```
# ~/.openclaw/agents.list
```

```
main
```

```
content-agent
```

```
code-agent
```

```
sales-agent
```

Module 08 · Multi-Agents

MODULE 08 · MULTI-AGENTS

Build Your AI COO

Leveling System (Kevin Simback)

Every new agent starts at L1 (Observer) and evolves according to performance.

LEVEL

NAME

PERMISSIONS

L1

Observer

Only reads. Output reviewed by you.

L2

Contributor

Performs simple tasks. Asks for confirmation before changes.

L3

Operator

Partial autonomy. Can execute without asking, but you review afterwards.

L4

Trusted

Full autonomy. You trust the output blindly.

Promotion and Demotion

Every week, review performance:

Promote: If the agent delivered well, go up 1 level

Demote: If it started to "rush" (deliver quickly but with low quality), go down 1 level

Real Case

Bruno's Content Agent started at L2, went up to L3, then FELL to L2 when it started to "rush" content (quantity > quality).

MODULE 08 · MULTI-AGENTS

Build Your AI COO

Shared Context: TEAM.md

TEAM.md is the "registry" of all agents. Each agent knows who does what.

Shared Outputs & Lessons

Agents share results and lessons:

TEAM.md

Main Agent (Amora)

- **Role:** Overall coordination, interaction with human, strategic decisions
- **Level:** L4 (Trusted)
- **Model:** Claude Opus

Content Agent

- **Role:** Content creation (scripts, posts, threads)
- **Level:** L2 (Contributor)
- **Model:** Claude Sonnet

Code Agent

- **Role:** Development, debugging, deploys
- **Level:** L3 (Operator)
- **Model:** Claude Sonnet

Sales Agent

- **Role:** Outbound, follow-ups, CRM
- **Level:** L1 (Observer)
- **Model:** Claude Haiku

Module 08 · Multi-Agents

04

MODULE 08 · MULTI-AGENTS

Build Your AI COO

Coordination: Hub Model > Mesh Model

Hub Model (Recommended)

Main agent curates. Specialized agents execute, main agent consolidates.

Main agent: Reads outputs, consolidates, reports

Other agents: Focus on execution, don't need to read everything

Mesh Model (NOT Recommended)

All agents read everything. Quickly becomes a mess.

·Rule

Specialized agents WITHOUT Telegram binding · they communicate via main agent, not directly with you.

Real Economy: Split Model

AGENT

MODEL

WHY

Main

Opus

Complex interaction, strategic decisions

Content

Sonnet

Content creation, analysis

Code

Sonnet

Debugging, development

Sales

Haiku

Repetitive tasks, simple emails

·Economy

Not every agent needs Opus. Sonnet for execution, Opus for strategy.

MODULE 08 · MULTI-AGENTS

Build Your AI COO

Module 8 Checkpoint

Decide if you need multi-agents now (or if 1 is enough)

1-2 extra agents created with SOUL and AGENTS.md

Leveling system configured (L1-L4)

TEAM.md created (agent registry)

Split model configured (not every agent uses Opus)

· Prompt for the Agent

Paste this prompt into your OpenClaw chat after watching Module 8:

I just watched Module 8 of the multi-agent course. Read the PRD and guide me in creating my first team of agents. What I need you to do: 1. Evaluate if I

need multi-agents now · if my use is still simple, tell me honestly

that it's early. Multi-agents without foundation = mess. 2. If it makes sense, help me

create 1-2 extra agents: - Ask me questions about what tasks I want to delegate -

Create the SOUL.md and AGENTS.md of each agent - Configure in the gateway (agents.list) 3.

Implement the leveling system: - L1 Observer · L2 Contributor · L3 Operator · L4

Trusted - Every new agent starts at L1 (output reviewed by me) - Explain to me

how to promote and demote 4. Configure the shared context: - TEAM.md ·

registry of all agents - shared/outputs/ · shared results -

shared/lessons/ · team learnings 5. Define the economy: - Which model for each

agent (not every agent needs Opus) - When to spawn sub-agents vs do in the

main session Rules: - Less is more · 2 well-made agents > 6 messy agents

- I (human) always in the loop of important decisions - In the end, show me the complete team and who does what Let's ass
